1 June 2020

## 1 Introduction

The main purpose of this document serves to explain the project management of the Employee Roll Call Application. This documents explains thorough and in depth as to what was done in ensuring and towards the contribution of the system. I had divided the project with explicitly defined tasks; to each task specified its time line. Below is the table showing structure of the project management I took during the development of the application:

## 2 Project Management Table

| Task  | Start date | End date   |
|---|------------|------------|
| Software Requirements Specification           | 10/02/2020 | 25/02/2020 |
| Architectural Design Specifications           | 8/03/2020  | 19/03/2020 |
| Application Design                            | 30/03/2020 | 6/04/2020  |
| Registration and Login                        | 6/04/2020  | 20/04/2020 |
| Clock in at work functionality                | 20/04/2020 | 27/04/2020 |
| Web Services Design                           | 27/04/2020 | 11/05/2020 |
| Leave Applications                            | 11/05/2020 | 18/05/2020 |
| Leave requests notifications                  | 18/05/2020 | 22/05/2020 |
| Application testing and making it more stable | 25/05/2020 | 30/05/2020 |

The above tasks outlined in the table above are the tasks that were implemented during the development of the project. And also, just as a reference, the methodology that was applied was the agile approach. This methodology was applied through out the entire project in ensuring the compatible and desired results of the project are reached successfully.
